IV NUTRITION THERAPY

Bringing you the healthcare
of tomorrow, **today!**

WHY NUTRITION THERAPY?

If we get high doses of quality vitamins, minerals, and other things that can help your body detoxify, lower inflammation, all while providing the nutrients needed, we can help you get better, look better, feel better, and be better.

The answer is simple. You can bypass your digestive system and get a more efficient/effective absorption of nutrients right through your bloodstream. With IV nutrition you can get very high levels of absorption of desperately needed vitamins and minerals. This can quickly restore the levels in the body needed for therapeutic changes. IV therapies can give your body what it needs to help restore your health. It can also help improve the results of your treatment program in our office.

70% of the North American diet is comprised of processed foods. Lack of nutrients in the foods we eat, as well as a compromised digestive system, leads to poor nutrient absorption. Today, people have demanding lifestyles, they aren't exercising enough also, not getting the proper amount of sleep. We also have to take into account the soil depletion which

has stripped the soil of a significant amount of nutrients that has led to poor food quality.

This has led to many health care crises across the country. In spite of technological advances in America, people are getting sicker and are becoming more and more unhealthy.

It has been said that many of today's modern health care problems are caused by inflammation in our bodies. Chronic inflammation has been shown to cause pain and can lead to other degenerative conditions your body.
